

NAVAL RESEARCH LABORATORY

TECHNOLOGY LICENSING OPPORTUNITY

COGNITIVE SIMULATION TOOL

Advantages/Features

Measures impact of foreign presence on a society before belief systems collide

Measures impact of organizational changes

Predicts coalitions and shifts of allegiance

Facilitates what-if simulations of information warfare

Predicts population attitudes in response to exogenous events

Visualizes group formation

Applications

Homeland Security

Education

Video Gaming System

Identification Number:

AI03

The Naval Research Laboratory (NRL) has patented an artificial intelligence and cognitive modeling technology related to computerized network interactions using knowledge base systems. The NRL patented technology applies to a learning algorithm grounded in social science to model interactions of agents/actors from different groups or cultures. The tool embedding this technology uses agent-based simulation of preference-driven agents endowed with cognitive maps representing their causal beliefs. Agents modify their cognitive maps through social learning using particle swarm optimization. A user can seed the simulation with diverse belief structures and activate the simulation to predict coalitions/conflicts and shifts of allegiance.
